Re: Application No. 09/537,405

Dear Examiner Pham,

We would like to discuss the following features, among others:

- 1) recording the data relating to photographing conditions (magnification at the time of photography, and information about a guidance frame)
- 2) an angle of photography detection unit which detects the angle of photography with respect to the surface of the subject,
wherein, in the document photographing mode, photography is started only when the angle of photography is substantially vertical. (in Claim 44)

We would also like to discuss combinability of prior art references.

Regards,

Choongsoo Park
